

Eclipse SDV Hackathon Evaluation Forms

HackCoach and Jury scorecards - Innovation Track and Freestyle / HackFest Track

Core Rules and Scoring

Only demonstrated or repository-verifiable work counts. Slides alone do not count for technical scoring. Prepared code must be declared clearly.

HackCoaches evaluate 80% of the score based on technical substance, impact, and demonstrated/repository-verifiable evidence. Jury members evaluate 20% based on final pitch quality, value communication, delivery, and contribution story.

Innovation Track and HackFest / Freestyle Track are independent competitions. Rankings must be calculated separately per track.

Score	Meaning
0	Not available / not shown
1	Very weak / only claimed
2	Partially fulfilled
3	Solidly fulfilled
4	Strongly fulfilled
5	Excellent / clearly above expectations

Extra Technology Points - Bonus Layer for All Challenges

Extra Technology Points are a bonus layer on top of the regular 100% evaluation. They do not modify the existing track weighting. Award points only when the technology is meaningfully used in code, configuration, deployment, integration, testing, demo, PR, issue, or a reproducible setup. **A logo or name on a slide does not count.**

Technology	Bonus	Evidence required
Eclipse openDUT	+0.10	Used in the solution, test setup, integration flow, or contribution.
Java / Jakarta EE	+0.10	Meaningful Java implementation, API, tooling, backend, test, or integration component.
Eclipse ThreadX	+0.10	Used as runtime, embedded target, integration component, demo device, or contribution.
Eclipse AutoSD	+0.10	Used as platform, deployment base, integration target, or contribution environment.

Bonus calculation: number of selected technologies x 0.10. Maximum bonus: +0.40. Final Score = MIN(5.00, Base Weighted Score + Extra Technology Bonus).

Combined Final Score including Bonus

Score Type	Formula / Entry
Base Weighted Score	Weighted HackCoach + Jury score, out of 5.00.
Extra Technology Bonus	0.00 to 0.40, based on meaningful use of openDUT, Java, ThreadX, and AutoSD.
Final Score including Bonus	MIN(5.00, Base Weighted Score + Extra Technology Bonus).

Innovation Track - HackCoach Technical & Impact Scorecard

Field	Value	Field	Value
Team Name		Challenge	
Track	Innovation Track	Evaluator	
Date / Slot		Repo / PR / Issue	
Location		Finalist	☐ Yes ☐ No

Innovation Track - Combined Score Overview

Criterion	Weight	Score
Problem Solving	13%	/ 5
Eclipse SDV Ecosystem Integrability	27%	/ 5
Development Methods	20%	/ 5
Working Demo	10%	/ 5
Code Does What It Claims	10%	/ 5
Pitch & Handover Clarity - Jury	8%	/ 5
Community Benefit & Continuation Story - Jury	7%	___ / 5
Contribution Focus & Initiative - Jury	5%	/ 5
Weighted Total	100%	/ 5.0

Impact - Problem Solving (13%)

Evaluation question: Does the solution solve the proposed problem / challenge?

Reviewer question: Which concrete problem do you solve, for whom, and how does your demo prove it?

Score	Level	Definition
0	No fit	No clear relation to the challenge.
1	Weak fit	Problem is only addressed superficially.
2	Partial	One relevant part of the challenge is solved.
3	Solid	The challenge is solved in a convincing way.
4	Strong	Solution addresses a real user or industry need.
5	Excellent	Clear measurable value, realistic usage, convincing outcome.

Score: ☐ 0 ☐ 1 ☐ 2 ☐ 3 ☐ 4 ☐ 5

Comments: _____

Impact - Eclipse SDV Ecosystem Integrability (27%)

Evaluation question: Does the solution make meaningful use of the specified Eclipse SDV projects and/or additional Eclipse SDV ecosystem projects?

Reviewer question: Which Eclipse SDV projects run in your system, and where can we see the integration in code or demo?

Score	Level	Definition
0	No SDV integration	No Eclipse SDV project used.
1	Basic usage	One Eclipse SDV project used.
2	Advanced usage	Two specified Eclipse SDV projects are used.
3	Solid integration	One or more Eclipse SDV projects are functionally integrated.
4	Strong ecosystem use	Multiple projects work together in a coherent flow.
5	Ecosystem contribution	Reusable PR, issue, Blueprint extension or integration or possible blueprint proposal contribution.

Score: ☐ 0 ☐ 1 ☐ 2 ☐ 3 ☐ 4 ☐ 5

Comments: _____

Technical Brilliance - Development Methods (20%)

Evaluation question: How structured, maintainable, and quality-oriented was the development process?

Reviewer question: How did you organize the work, document decisions, and ensure maintainability?

Score	Level	Definition
0	No process	No roles, no plan, no visible working method.
1	Ad hoc	Some split of work, but little structure.
2	Basic	Roles, tasks or simple planning are visible.
3	Solid	Structured work with GitHub, task split, architecture idea.
4	Strong	Tests, code review, documentation, clear interfaces.
5	Excellent	Mature process, architecture, QA, traceability, open-source handover.

Score: ☐0 ☐1 ☐2 ☐3 ☐4 ☐5

Comments: _____

Technical Brilliance - Working Demo (10%)

Evaluation question: Is there a working live demo available?

Reviewer question: Please show the most important end-to-end flow live. What happens when an input changes?

Score	Level	Definition
0	No demo	Nothing runs.
1	Very limited	Single component runs, but not challenge-relevant.
2	Partial	Parts of the solution are demonstrated.
3	Working	The core flow runs live.
4	Robust	Live demo works and explains the system context.
5	Excellent	Stable, reproducible demo with variants or failure handling.

Score: ☐0 ☐1 ☐2 ☐3 ☐4 ☐5

Comments: _____

Technical Brilliance - Code Does What It Claims (10%)

Evaluation question: Does the resulting code do what it is supposed to do according to the solution plan, documentation, or pitch?

Reviewer question: Where in the repository can we see the core function, and which parts are complete, mocked or prepared?

Score	Level	Definition
0	Not aligned	Code does not match the described solution.
1	Weak	Major gaps between claim and implementation.
2	Partial	Some central claims are visible in the code.
3	Solid	Code fulfills the core function of the described solution.
4	Strong	Code, documentation and demo are consistent.
5	Excellent	Reproducible, understandable, well defined CI pipelines and ready for open-source follow-up.

Score: ☐0 ☐1 ☐2 ☐3 ☐4 ☐5

Comments: _____

Innovation Track - Jury Final Pitch Scorecard

Field	Value	Field	Value
Team Name		Challenge	
Track	Innovation Track	Evaluator	
Date / Slot		Repo / PR / Issue	

Selling Points - Pitch Deck (4%)

Evaluation question: Do the slides clearly describe the proposed problem / challenge and the solution?

Reviewer question: What is the problem, why does it matter, and why is your solution better than the obvious approach?

Score	Level	Definition
0	No deck	No usable slides.
1	Weak	Problem and solution remain unclear.
2	Partial	Either problem or solution is understandable.
3	Solid	Problem, solution and demo are understandable.
4	Strong	Clear story with technical and business context.
5	Excellent	Executive-ready story, concise, relevant and visually strong.

Score: ☐0 ☐1 ☐2 ☐3 ☐4 ☐5

Comments: _____

Selling Points - Business Perspective (4%)

Evaluation question: Are the pitch and story attractive from a business, industry, or community perspective?

Reviewer question: Who would use this tomorrow, and which metric or outcome would improve?

Score	Level	Definition
0	No value	No clear benefit.
1	Weak	Benefit is claimed but not explained.
2	Plausible	Relevant use case, but still superficial.
3	Solid	Clear target group and understandable benefit.
4	Strong	Good argument for impact, efficiency, quality, time-to-market or community value.
5	Excellent	Pilotable idea with target group, value proposition and clear next step.

Score: ☐0 ☐1 ☐2 ☐3 ☐4 ☐5

Comments: _____

Selling Points - Pitch Delivery (4%)

Evaluation question: Is the pitch clear, engaging, well structured, and convincing?

Reviewer question: What is the one message we should remember from your pitch?

Score	Level	Definition
0	Not presented	No complete pitch.
1	Hard to follow	Unclear or unstructured.
2	Basic	Understandable, but not very convincing.
3	Solid	Good structure and clear communication.
4	Strong	Strong story, good timing, convincing speakers.
5	Excellent	Memorable stage presence and very clear message.

Score: ☐0 ☐1 ☐2 ☐3 ☐4 ☐5

Comments: _____

Selling Points - Creativity and Surprise (8%)

Evaluation question: Is the solution surprising, creative, or based on out-of-the-box thinking?

Reviewer question: What is different from what we expected, and which idea should the community continue after the hackathon?

Score	Level	Definition
0	No creativity	No own approach visible.
1	Expected	Obvious implementation without a special idea.
2	Some creativity	A few creative elements.
3	Solid	Independent approach with visible originality.
4	Strong	Surprising combination of technology, use case or story.
5	Excellent	Original, bold, convincing and highly relevant to Eclipse SDV.

Score: ☐0 ☐1 ☐2 ☐3 ☐4 ☐5

Comments: _____

Freestyle / HackFest Track Evaluation Forms

Purpose: This scorecard is used for teams competing in the Freestyle / HackFest Track. The track focuses on real contributions to Eclipse SDV projects, Blueprints, integrations, documentation, issues, or pull requests. It is not primarily a business-pitch competition.

Evaluator split: Use the same split as the Innovation Track: HackCoaches evaluate 80% of the score, Jury members evaluate 20% of the score. No Project Leads are formal evaluators in this model.

Freestyle Work Focus

The Freestyle / HackFest Track prioritizes contributions that advance existing Eclipse SDV project work. New ideas are welcome, but they score highest only when they are clearly connected to a real project need and are documented so the community can continue them.

Mode	Description	Scoring guidance
A. Existing Project Work	The team works on an existing issue, PR, bug, documentation gap, test gap, integration gap, or Blueprint task.	Preferred Freestyle mode and eligible for the highest scores.
B. Existing Work + Improvement	The team starts from existing work and adds useful analysis, integration, documentation, tests, or a proposed extension.	Eligible for the highest scores if the existing work is clearly advanced.
C. New Improvement Idea	The team identifies a new idea that was not previously listed.	Allowed, but should score highly only if connected to a real project need and documented as a follow-up issue, proposal, or reusable artifact.

Freestyle / HackFest Track - Combined Score Overview

Criterion	Weight	Score
Contribution Value - HackCoaches	25%	___ / 5
Technical Quality & Maturity - HackCoaches	25%	___ / 5
Eclipse SDV Ecosystem Impact - HackCoaches	20%	___ / 5
Reusability & Maintainability - HackCoaches	10%	___ / 5
Pitch & Handover Clarity - Jury	8%	___ / 5
Community Benefit & Continuation Story - Jury	7%	___ / 5
Contribution Focus & Initiative - Jury	5%	___ / 5
Weighted Total	100%	___ / 5.0

Freestyle / HackFest Track - HackCoach Scorecard

Field	Value	Field	Value
Team Name		Challenge / Focus Area	
HackCoach Name		Interview Slot	
Repository / PR / Issue / Blueprint Link			

Contribution Value (25%)

Evaluation question: Did the team create a real, reviewable contribution?

Reviewer question: Which repository, Blueprint, PR, issue, or reusable artifact did you move forward?

Score	Level	Definition
0	No contribution	No PR, issue, patch, documentation, or reusable artifact submitted.
1	Idea only	Mostly conceptual and not reviewable.
2	Small contribution	Minor fix, small documentation update, or partial issue analysis.
3	Useful contribution	PR, issue, prototype, or artifact addresses a real project need.
4	Strong contribution	Contribution solves a meaningful problem or enables a relevant integration.
5	High-impact contribution	Contribution is valuable enough that the Eclipse SDV community should actively continue it after the event.

Score: ☐0 ☐1 ☐2 ☐3 ☐4 ☐5

Comments: _____

Technical Quality & Maturity (25%)

Evaluation question: Is the contribution technically sound and close to usable?

Reviewer question: What works today, what is still missing, and what would be needed before this could be accepted or reused?

Score	Level	Definition
0	Not working	Cannot be reviewed or executed.
1	Experimental only	Prototype is fragile, undocumented, or disconnected.
2	Partial	Some parts work, but major gaps remain.
3	Solid	Technically understandable and mostly functional.
4	Mature	Clean structure, clear implementation, and reasonable validation.
5	Near merge-ready	Well-structured, documented, validated, and close to adoption.

Score: ☐0 ☐1 ☐2 ☐3 ☐4 ☐5

Comments: _____

Eclipse SDV Ecosystem Impact (20%)

Evaluation question: Does the work strengthen the Eclipse SDV ecosystem?

Reviewer question: Who in the Eclipse SDV community can reuse this after the Hackathon?

Score	Level	Definition
0	No SDV relevance	No visible relation to Eclipse SDV.
1	Basic relevance	Supports one Eclipse SDV project or Blueprint.
2	Advanced relevance	Supports at least two Eclipse SDV projects or Blueprints.
3	Useful ecosystem value	Improves integration, tooling, onboarding, documentation, or issue handling.
4	Cross-project value	Connects or improves interaction between multiple Eclipse SDV projects.
5	Strategic value	Creates reusable value for the wider SDV community, such as a Blueprint pattern, integration path, or contributor workflow.

Score: ☐0 ☐1 ☐2 ☐3 ☐4 ☐5

Comments: _____

Reusability & Maintainability (10%)

Evaluation question: Can others understand, reproduce, and continue the work?

Reviewer question: Could another contributor pick this up next week without your help?

Score	Level	Definition
0	Not reusable	Work cannot be reproduced or understood.
1	Hard to reuse	Missing setup steps, unclear dependencies, or no clear entry point.
2	Partially reusable	Some instructions exist, but reproduction is difficult.
3	Reusable	Another contributor could continue with moderate effort.
4	Well prepared	Good documentation, setup steps, architecture notes, and known limitations.
5	Community-ready	Easy to reproduce, extend, review, and maintain.

Score: ☐0 ☐1 ☐2 ☐3 ☐4 ☐5

Comments: _____

Freestyle / HackFest Track - Jury Scorecard

Field	Value	Field	Value
Team Name		Challenge / Focus Area	
Jury Member		Pitch Time	
Repository / PR / Issue / Blueprint Link			

Pitch & Handover Clarity (8%)

Evaluation question: Did the team clearly explain what they built, changed, fixed, or contributed?

Reviewer question: What exactly did you contribute, and where can we see it?

Score	Level	Definition
0	Weak	Unclear what was achieved.
1	Basic	Main result is understandable, but details are missing.
2	Solid	Clear explanation of result.
3	Good	Clear explanation of result, links, and next steps defined.
4	Strong	Very clear handover with PRs, issues, docs, limitations, and open questions.
5	Excellent	Jury can immediately understand what happened and why it matters.

Score: ☐0 ☐1 ☐2 ☐3 ☐4 ☐5

Comments: _____

Community Benefit & Continuation Story (7%)

Evaluation question: How clearly does the team explain the concrete benefit for the Eclipse SDV community and how the work can continue after the event?

Reviewer question: What concrete benefit does your work create for the Eclipse SDV community, and what should happen next after the Hackathon?

Score	Level	Definition
0	Not explained	The team does not explain what community benefit their work creates.
1	Very unclear	The contribution is related to an Eclipse SDV project, but the benefit is hard to understand.
2	Basic	The team explains the benefit for one project, but the continuation path is vague.
3	Solid	The team clearly explains the benefit for a project, Blueprint, issue, or contributor group and names realistic next steps.
4	Strong	The team explains who can reuse the work, what should happen next, and how it supports project collaboration or adoption.
5	Excellent	The team gives a compelling continuation story with clear links to PRs, issues, documentation, maintainers, and follow-up actions for the Eclipse SDV community.

Score: ☐0 ☐1 ☐2 ☐3 ☐4 ☐5

Comments: _____

Contribution Focus & Initiative (5%)

Evaluation question: Did the team focus on meaningful Eclipse SDV project work and show useful initiative in moving it forward?

Reviewer question: Which existing project issue, PR, Blueprint task, documentation gap, test gap, or integration need did you move forward, and what is the concrete next step after the event?

Score	Level	Definition
0	Not aligned	The work is not connected to an Eclipse SDV project, Blueprint, issue, PR, or known project need.
1	Weak alignment	The work is loosely related to a project, but the selected contribution focus is unclear.
2	New idea only	The team proposes or starts a new improvement idea, but the connection to existing project needs is only partially clear.
3	Existing work addressed	The team works on an existing issue, known gap, Blueprint task, documentation need, test need, or integration need.
4	Existing work moved forward	The team makes visible progress on existing work and adds useful analysis, implementation, documentation, tests, or next steps.
5	Existing work significantly advanced	The team substantially advances existing project work and leaves it in a state that is easy for the community to review, continue, or adopt.

Score: ☐0 ☐1 ☐2 ☐3 ☐4 ☐5
